external Actor to system

a UML loop interaction frame, with a boolean guard expression

return value(s) associated with the previous message

an abstraction that ignores presentation and medium

the return line is optional if nothing is returned

system as black box

the name could be "NextGenPOS" but "System" keeps it simple

the ":" and underline imply an instance, and are explained in a later chapter on sequence diagram notation in UML

total with taxes

makePayment(amount)

change due, receipt

a message with parameters

it is an abstraction representing the system event of entering the payment data by some mechanism
